

Help get certified for Cyber Essentials (CE)

Use Rebasoft to better assess your systems against Cyber Essentials controls.

Looking to get certified?

We probably don't need to tell you that **Cyber Essentials (CE)** is the most common security framework in the UK. The benefits of following it include; [preventing about 80% of attacks](#), the ability to work with the UK government and building trust with customers and partners.

Rebasoft is an advanced security assessment and monitoring system which maps to multiple **CE** controls. If you use **Rebasoft**, you can make certifying and operating **CE** and **CE Plus** much simpler, using fewer systems and automation which can offer massive cost savings.

From one system, Rebasoft can:

- 1 Discover all digital IT assets - CE Controls in A2**
Foundational discovery and inventory of digital IT assets without needing agents - offering a complete, unified view of your IT estate.
- 2 Assess for secure configuration - CE Controls in A4, A5 & A8**
You can reduce the complexity of compliance by using just one tool for both endpoint configuration compliance and network infrastructure monitoring/validation. Rebasoft uses **STIG/DOD** recommendations.
- 3 Continuously assess for vulnerabilities - CE Controls in A6**
Say goodbye to infrequent, manual scans, Rebasoft automatically assesses assets for vulnerabilities on a continuous basis, even if they are offline. You can track conformance to your chosen security standard's patching timeframe requirements and reduce the time to patch issues based on a priority basis.
- 4 Record events for output to SIEM**
Output contextual events and incidents to your chosen SIEM. This makes it easier and faster to remediate affected assets.
- 5 Monitor continued compliance**
Automatically monitor networks and discover new devices without needing manual scans. You can find security gaps and even detect malware spread. This makes ongoing compliance much easier.

Benefits:

- 1 Save money**
Automate much of what would usually take days of expensive consultation.
- 2 Unified view**
You can save time, effort and reduce human error. Rebasoft discovers and correlates data from multiple systems, so you don't have to.
- 3 Continuous security**
Once it's in place, it's easy to continue monitoring compliance and quickly identify security gaps throughout the year.
- 4 Fast results**
A quick and easy deployment means you can get on track for certification in no time.
